## EN – Key depository manual KB.G7

### Opening and closing the depository:

Slide the cover of the dial. Set the factory code on the dial (the factory code is “0000”).

Slide the door opener down. Open the door and insert or take out the keys. Close the door and turn the dial, for not to be seen the number code. Slide up the dial cover.

### Setting your own number code:

1. Set the factory code on the dial (factory code is “0000”).
2. Move the RESET button to the left and down (from position A to the position B, picture n. 1) on the inner side of the door.
3. Set your own number combination of the dial (picture n. 2).
4. Move the RESET button up and to the right (from position B to position A). Make sure, that the RESET button to original position and small silver lever protrudes from the side.
5. Close the door and turn the dial for not to be seen the opening code.
6. Slide up the dial cover.

### Removing the shackle:

Open the door and remove the shackle from the depository. Insert the shackle to the holes at the top of the lock (picture n. 3).

For removing the shackle from the lock, press the lever to the right inside the depository (picture n. 4).

### Warning:

The safety dial cover against weather conditions should be slid up, ensuring better endurance.

We do not recommend to set the code combination as a “4444”, because it is easy to crack.

We recommend to turn the dial once a week, for problem-free function.
